

These sites were identified using the AOLSA (Administration/Ownership Land Status/Ownership) database developed by Utah State University (updated May 2004). The following assumptions were used to identify the top 21 state land areas with class 5 or greater wind resource:

- 1) Wind resource class 5 or better
- 2) Within 5 miles of transmission lines
- 3) Within 5 miles of road
- 4) Not in a wetland area
- 5) Exclude state parks, recreation and wildlife reserves
